

NBT.7: Sharing the Bill

Some friends went to eat pizza and they wanted to *share* the bill. Which math operation will you use to show that the friends *shared* the bill? Write an expression to show how you will solve the problem.

Some friends went to eat pizza and they wanted to share the \$19.80 bill evenly. Write an expression to show how you will solve the problem.

Five friends went to eat pizza and they wanted to share the \$19.80 bill evenly. Write an expression to show how you will solve the problem.

How much will each friend pay? Write an expression that will result in a quotient that is *too low* and an expression that will result in a quotient that is *too high*.

Too low:

Too high:
